

CONTAINER BAG:

Container bags are specially designed to protect the goods from the damages caused by condensation during transport via container.

Thanks to the specific formulation they guarantee a dehydrating action throughout the period of transport.

Available also with suspension hook.

DEHYDRATING BAGS

Dehydrating bags absorb moisture present in packages and they solve the problem of the condensation at its source.

Available in various weights the dehydrating bags can be adapted to any kind of packaging on the market.

In compliance with safety standards: **DIN, ML, NFH**
