

DUNNAGE AIR BAG

PERFECT SECURING OF YOUR GOODS:

Air bags (also known as Dunnage bags) are the most economical and reliable means of securing your load in your truck trailer, rail car, sea container or vessel. The purpose of the dunnage air bags is to reduce the shifting of the loads occurring during transport, which will enhance customer satisfaction because of no damage or returned goods. These air bags have been specially designed to provide optimal security throughout the transport. It is recommended for containers, trucks, ships and railway cars.

APPLICATION:

These dunnage air bags are used for securing of goods on pallets, cartons, crates, drums and other packaging. They can be placed horizontally or vertically in the spaces between the goods, along walls or under the roof, they are easy to handle and quick to inflate with the latest generation pistol fitted with a pressure relief valve.

SPECIFICATION:

These dunnage air bags have two layers.

Maximum pressure : 0.26 kg/cm² (example: for a bag of 90x180 cm: $90 \times 180 \times 0.26 = 4212$ kg)
