

BUBBLE LINER 20' & 40'

The kit Bubble Liner consists of two elements: complete kit of PET with air bubbles and string to support. Ideal for the transport of sensitive goods, it allows to limit the thermal shock and the entrance of moisture inside the container, in order to safeguard the integrity of the product.

This type of cover will be the ideal solution for the exportation of sensitive goods like wine, mineral water, oil, electronical and pharmaceutical products and so on.

BUBBLE LINER INSTALLATION GUIDELINES

With the rope supplied with the liner make a complete tour while passing through each ring and tie-down attachment points at the top of container (strain maximum).

Then unroll the kit on the container floor, take the snap-hook welded to the thermal blanket and hook them to the rope (repeat the operation on both long sides of the CNTR).

After the loading of the goods seal up the door of the Bubble Kit with the specific Velcro.
